PRODUCT LEADER + MUSIC BUILDER

I loved discovering music.

So I built a better way

to keep it.

Meet Needle — an independently built music discovery product.
And the product leader behind it.

EUGEN SKOROMNY

Product Lead · Based in Portugal · Open to London / Stockholm

THE INSIGHT

Discovery happens everywhere.

Keeping it still takes work.

01 / HEAR IT

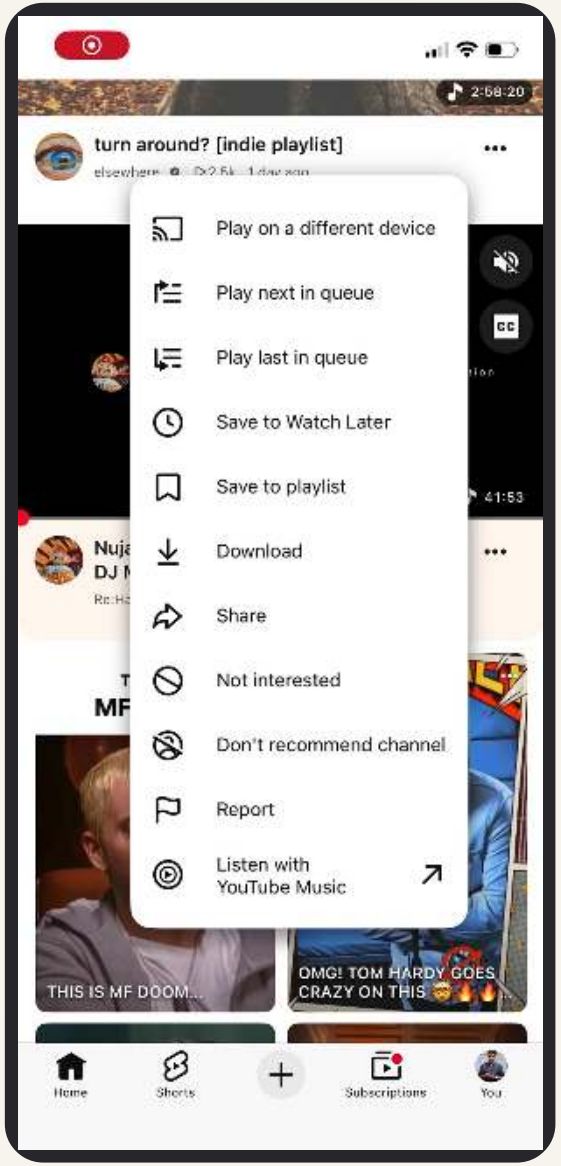

A brilliant track appears in a Reel or video.

02 / CHASE IT

The song is buried in an unfamiliar mix.

03 / LOSE IT

The moment passes. Your playlist stays empty.

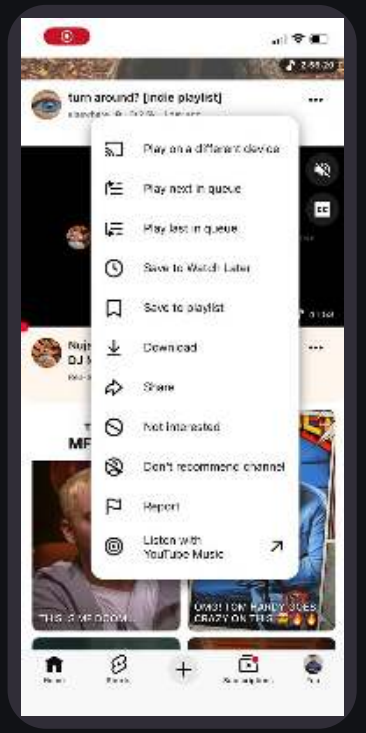

The opportunity is not more music. It is less friction between discovery and listening.

THE PRODUCT

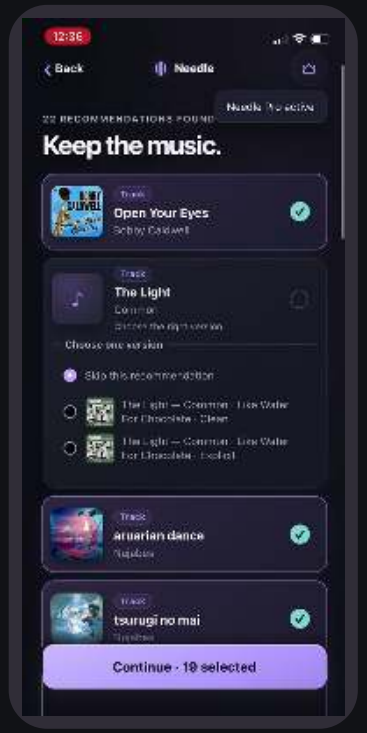

One link. A playlist.

An actual iPhone walkthrough — not a prototype or a mocked-up interface.

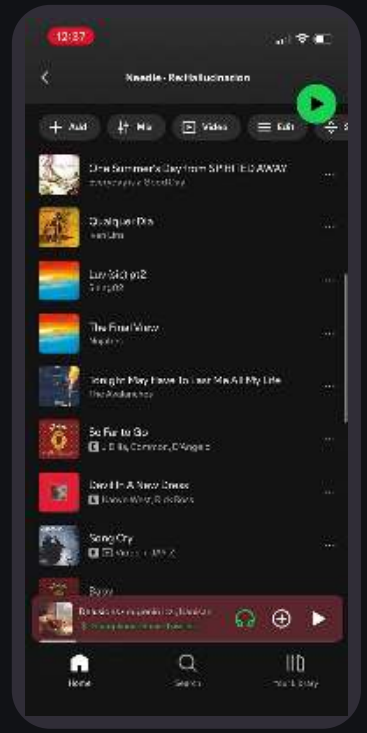

CAPTURE

Start from a video

REVIEW

Choose the right tracks

LISTEN

Find the playlist in Spotify

WATCH THE REAL PRODUCT

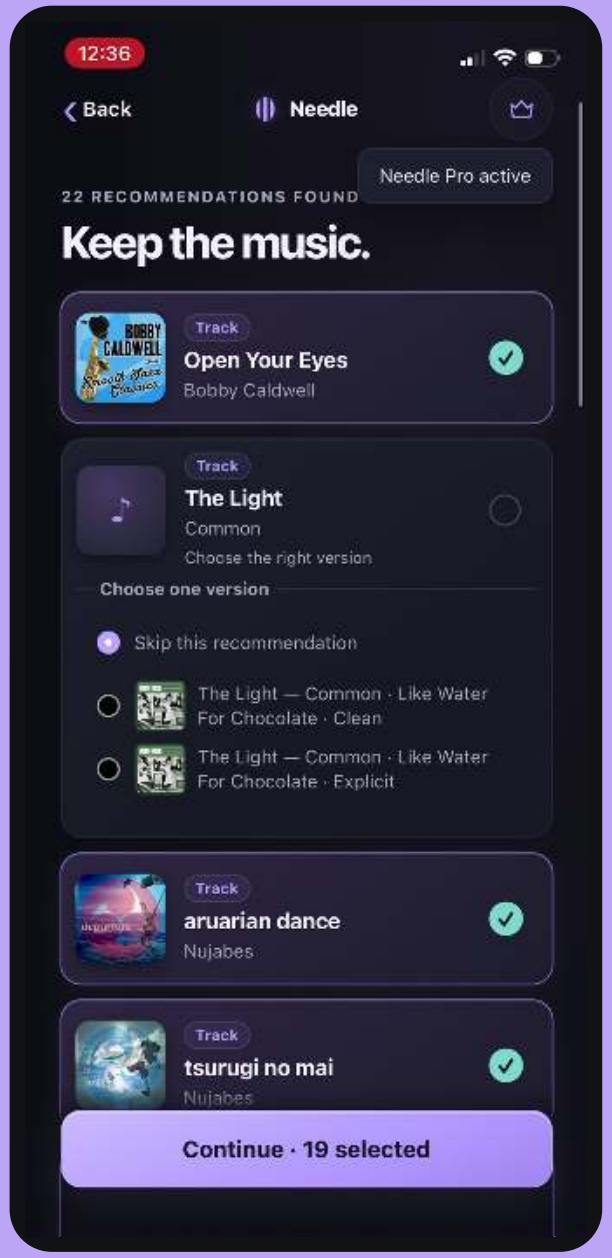

The demo is the proof.

22 tracks selected in this recording.

Recognition → version review → playlist creation → Spotify.

39-second cut from the original 88-second iPhone recording. Waiting periods removed; no interface recreation.

VIDEO INCLUDED IN PPTX / SEPARATE MP4 PROVIDED

HOW I THINK

A link is not a track ID.

The hard part is not generating a list. It is earning trust in every match.

01 SIGNAL

Messy video, artist hints

02 CANDIDATES

Extract possible tracks

03 JUDGMENT

Versions, remixes, uncertainty

04 ACTION

Review and export

ACCURACY

Show low-confidence alternatives rather than silently guess.

COST

Use cheap signals first; escalate only when uncertainty demands it.

UX

Keep human choice where the wrong song would break trust.

THE TRACK RECORD

I have shipped at scale.

MEGAFON / CONSUMER MOBILE

16M
MAU

2.7M
DAU

+1M MAU growth · +15% ARPU improvement

VODAFONE / AI

AI agents. Knowledge. Governance.

Product strategy across cross-team AI-powered workflows.

NEEDLE / PERSONAL BUILD

Hands-on product decisions, real code, and the full path from idea to working flow.

PRINCIPAL PM · SEARCH PERSONALIZATION

A search result is only right when it matches intent.

Needle exposed a deceptively hard problem: a short video is not a clean track ID. Versions, remixes, metadata gaps and confidence all shape listener trust.

RELEVANCE

Choose the intended recording, not only the closest title.

CONFIDENCE

Reveal ambiguous candidates; keep the user in control.

TRADE-OFFS

Balance matching coverage, latency and API cost.

From a personal prototype to rigorous relevance evaluation at Spotify scale.

I want to build what people listen to next.
